

Metals Impact Tester - Class H 750J - Single Column Charpy and Izod Impact Tester

Standard

ASTM E23, ASTM E1820, ASTM E2298, ISO 148, EN10045, ISO 148, EN10045, ISO 14556, JIS Z 2242, GOST 9454-78

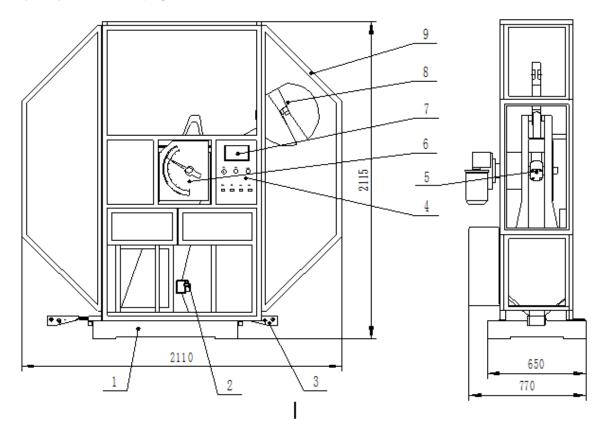

Application:

- Impact on metals, Charpy, both noninstrumented and instrumented
- Servo motor driven pendulum can stop at any position, realizing different angle/energy impact test for R&D use
- Equipped with cooling system, I can perform low temperature test down to -180°C

Machine Structure

The basic model consists of a heavy steel base on which the specimen holder (anvil) and a heavy-duty cast steel upright are mounted.

1 Framework

2 Specimen supports and anvils

4 Control panel

8 Striker

6 Analogue display

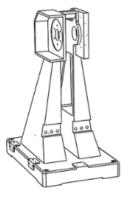

- 3 Specimen collection device
- 5 Pendulum
- 7 Touch screen
- 9 Protection shield

Framework

The framework is processed with one body casting. Front and rear columns are symmetric with single beam support axis, with high stiffness and precision.

The framework is made from ductile cast iron with high strength and stiffness, and with good capability of vibration absorbing.

The seat mass is 822kg, 15 times than 750J pendulum mass (54.65), fully complying with standards that seat mass must be 12 times than pendulum mass.

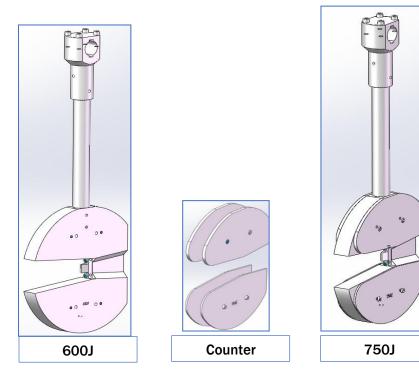

Pendulum

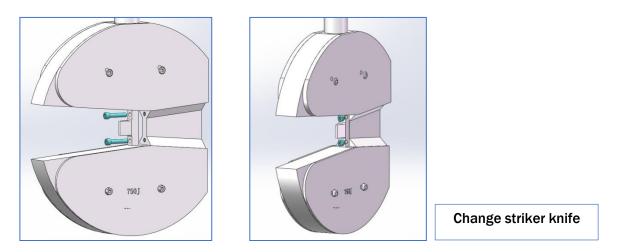

Pendulum is designed with 3D CAD software, greatly ensuring the striking center accuracy and pendulum moment precision. High strength pendulum rod highly reduces vibration after impact.

u	•	•
•	•	0 1801 O

Striking head is combined design. 300J plus two counter weights becomes 450J, and 600J plus two counter weights becomes 750J. It is convenient to perform different energy tests with frequent changing pendulums.

Striking knife is tightened by wedge block, simple to change. Striking knife is available with R2 and R8, fully complying with ASTM, JIS, DIN, GB, ISO, EN and other standards.

Striking knife is made of anti-wearing high speed tool steel with hardening treatment, and hardness is larger than HRC60, with high strength, ductility and abrasion resistance.

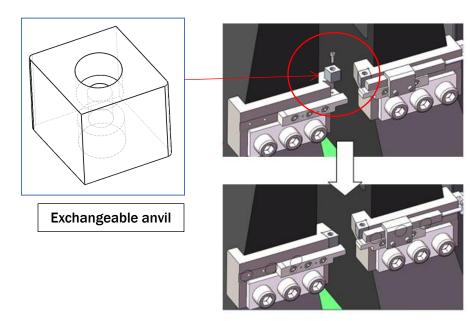

Supports and Anvils

Anvil shape is rhombus and can be used in any direction, meaning the using life is 4 times than traditional anvil.

The anvil material is high speed tooling steel CW6Mo5Cr4V2 after hardening treatment, and the hardness is larger than HRC60, with high strength, ductility and abrasion resistance.

It is very simple to change anvils with inner hexagon spanner. The anvil is machined by special process with high precision and good interchangeability.

Anvil is exchangeable and can be used four times by changing mount directions, greatly improving the servicing life and saving cost.

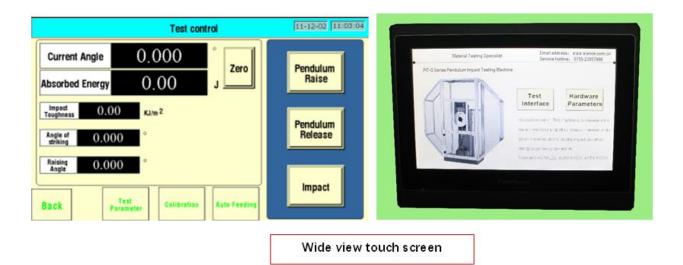

Energy Display System

Three types of energy display are available:

- Analogue display: simple and direct to read impact energy
- Wide view touch screen
- Computer with test software

Analogue display

Specimen Collection System

- Motorized device is used for collecting broken specimens after impact, instead of manual cleaning, which fully prevents striker from getting stuck
- Unique specimen filtering function: automatically judge and transport qualified and unqualified specimens to different collecting box

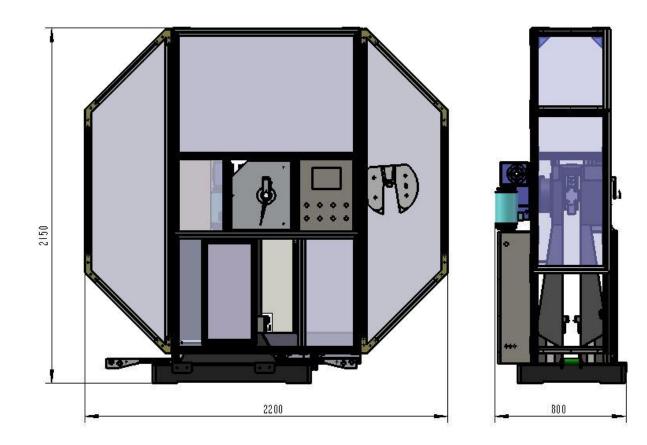

Safety System

This series of machine has fully closed protection shield to protect operator against specimen splitting during test, and to deny any access to the inside during test. Built-in door interlock further ensures operator safety. The protection shield is constructed with aluminum alloy profile for frame and fiber glass for easy observation. Split-type door design is simple to repair and change pendulum.

Specifications for Main Machine

Name		Description	
Model No.		Class H	
Maximum impact energy		300J, 450J, 600J, 750J	
Angle resolution		0.025°	
Distance from the axis of support to the center of percussion		750mm	
Velocity of striking		5.24m/s	
	Span	40mm	
Anvil	Radius of curvature of supports	1mm	
	Angle of taper of supports	11°±1°	
Instrumented striking	Radius of striking edge	2mm(R2) or 8mm(R8)	
Instrumented striking knife	Angle of striking tip	30°	
Kille	Thickness of striker	16mm	
Dimension (with protection shield)		77.15 x 26.77 x 78.75 – inches 196 x 68 x 200 cm	
Weight		1764lbs 800kg	
Power supply		220V±10% 50Hz 5A

Optional Pendulums

Name	Description	
	300J	
Charpy pendulum	450J	
Please specify ISO striker or ASTM striker	600J	
	750J	

Note:

1) 450J pendulum is assembled by 300J pendulum with two counter weight.

2) 750J pendulum is assembled by 600J pendulum with two counter weight.

Optional Instrumented Pendulums

Name	Description	
	300J	
Instrumented Charpy pendulum & specimen support (striking knife with 30kN force transducer: R2/R8) Please specify ISO striker or ASTM striker	450J	
	600J	
	750J	

Note:

1) 450J pendulum is assembled by 300J pendulum with two counter weight.

2) 750J pendulum is assembled by 600J pendulum with two counter weight.

Optional Notch Broacher

Name	MODEL	Specifications
Notch Making Machine	GenNotch 4000	V2 and U5 notch Comply with ISO148 and ASTM E23

Optional Configurations:

Name	Model	Description	Accessories
Automotic cooling and	LTC601A-2	-60°C-ambient Cooling method: compressor	Specimen auto-feeding system Low temperature chamber Compressor Air pump
Automatic cooling and feeding system	LTC102B-2	-100°C-ambient Cooling method: liquid nitrogen	Specimen auto-feeding system
	LTC182B-2	-180°C-ambient Cooling method: liquid nitrogen	Low temperature chamber Liquid nitrogen cylinder Air pump
Manual cooling system	CDW-60-05	-60°C-ambient Cooling method: compressor	Low temperature chamber Compressor
	CDW-80-05	-80°C-ambient Cooling method: compressor	Low temperature chamber Compressor
