NG-RockGen DGEN Series – Rockwell Regular, Superficial and TWIN Digital Hardness Testers

Standards

ASTM E18 and ISO 6508

Description

The NG-RockGen is designed to test the hardness of metals by determining the depth of penetration of an indenter under a large load compared to the penetration made by a preload according to the Rockwell scale. There are variations of the RockGen DGEN system for Rockwell Regular scales, Superficial Scales as well as a TWIN DGEN system capable of both regular and superficial scales. With an easy to navigate operational menu, the RockGen DGEN provides the solution for any Rockwell testing requirements. With a resolution of 0.001, the system will provide you with the absolute highest accuracy on the market.

Main Function and Features of RockGen DGEN

- High gloss and scratch resistance surface allows the unit to maintain a brand new look even after many years of use
- Large LCD Display for clear visibility of your hardness readings. Removes all aspects of human error.
- Automatic Testing procedures. System will make the indentation and provide the reading automatically.
- The DGEN system provides a high level of repeatability when testing any parts for Rockwell hardness.

Main Application

Chilled steel, hardened and tempered steel, annealed steel, casting, malleable cast, hard alloy, hardened steel plate, aluminum alloy, bearings steel.
